Introducing Zenodo
Research. Shared.

ERDMANN, Christopher C. (Harvard-Smithsonian Center for Astrophysics), NIELSEN, Lars Holm (CERN)

The Mission
To provide an open dependable home for the long tail of science. ZENODO enables researchers, scientists, projects and institutions to share and showcase multidisciplinary research results (data and publications) that have not found a home in existing institutional or subject-based repositories.

The Name
ZENODO is inspired by Zenodotus of Ephesus, the first librarian of the Ancient Library of Alexandria and father of the first recorded use of metadata, a landmark in library history.

Upload
Initial 2GB per file, multiple files allowed.
Any file format - data, publications, poster, presentations, images, videos, you name it!
Upload straight from your DropBox account.

Describe
Enter metadata.
Preview Digital Object Identifier (DOI).
Open, embargoed and private access supported.

Publish
Available immediately after submission.
Altmetrics integrated.
Linking with grants.

(All) Research. Shared
all research output from across all fields of science are welcome!

Communities
accept or reject uploads to your own community collections (making it your digital repository).

Flexible Licensing
because not everything is under Creative Commons.

Citable. Discoverable.
Digital Object Identifier (DOI) minted for uploads to make them easily and uniquely citable.

API
integrate your app via our programmable REST API.

Funding
integrate into reporting for research funded by the European Commission via OpenAIRE.

Preservation
Research data management and sharing can be very time-consuming and lots of data is not even shared at all (i.e. it’s lost).
We try to make it as easy and painless as possible.

Quality
Uploads go online immediately after submission.
We review submissions in certain cases but we provide the tools for YOU to curate uploads via Communities.

Open
Metadata licensed under CCZero
Programmable REST APIs
Harvest all metadata and data files via OA-PMH.
All source code available as Open Source.

Safe
Developed and operated by CERN.
Your research output is stored safely for the future in the same cloud infrastructure as research data from CERN's Large Hadron Collider.
Built on Invenio Software - battle tested by CERN for more than 12 years, in repositories with millions of records.

ZENODO is developed under the EU FP7 project OpenAIREplus (grant agreement no. 283595) by CERN based on Invenio Software.

This work is licensed under a Creative Commons Attribution 4.0 International License.
