1. Roles and responsibilities
   The PI is responsible but will draw support from RAs and support services at the uni

2. Expected data
   Existing data isn't sufficient to answer the research question so survey data will be produced through interviews. Transcripts will be produced and shared in anonymised form.

3. Period of data retention
   Data will be deposited with the UKDA and preserved for as long as appropriate.

4. Data format and dissemination
   Audio files will be uncompressed wav files. SPSS will be used to code and analyse the data. These are standard approaches, recognised as best practice in the community. Consent agreement will be signed by research subjects and may preclude sharing. Wherever possible, data will be shared in anonymised form.

5. Data storage and preservation of access
   Data will be backed up via IT services at the uni which offer daily, incremental backups and keep a copy offsite. Access will be managed via passwords and controls on user accounts. Data will be deposited with the UKDA for long-term preservation.
