

DMP Roadmap Overview of Project

Diana Sisu/Kevin Ashley

Reusable with attribution – CC-BY

History

- DCC checklist for data management plans – 2008
- DMPonline V1 launched April 2010 – focus on UK but included other models (e.g. NSF requirements) from outset
- DMPTool work begins in 2011, led by UC3 – collaboration between them and DCC from the outset
- ADMP interest group discussions at RDA P3 (Dublin) 2014 – established 2016
- February 2016 – DMPTool & DMPonline agree to establish a single codebase – DMPRoadmap is born!
 - At about the same time – U Alberta establishes DMP Assistant using DMPonline code with support from DCC – becomes part of Portage, then Alliance national service in Canada
- RDA P9 (2017) - ADMP IG session establishes 3 working groups, including maDMPs
- January 2018 – live services now all using the DMPRoadmap codebase

The codebase and the services

- Our codebase – DMPRoadmap – is shared
- Our services behave differently
- DMPTool – a collaboration of US universities
- DMPonline – subscription service to institutions, funders, national bodies (but free to use for any researcher)
- DMP Assistant – a funded national service for Canada
- DMP OPIDoR – a portal for data management for HEIs in France
- The names in each case characterise the service provided by each deployment

roadmap

How we work

- Decide development priorities together
- Priorities based on input from end users and institutions
- Shared code
- Available pen source
- Specialist interest groups
- Working as a community, developing for a target community

<https://github.com/DMPRoadmap/roadmap>

Current priorities

- Machine-actionability
- Research Outputs tab will allow for more granular description of specific research outputs
- Integration with the Registry of Research Data Repositories (re3data)
- Integration with FAIRsharing
- Plan versioning
- New plan creation wizard
- Updates to infrastructure – recently moved to Rails 6, currently working on Bootstrap, Google Services
- Development Priorities
